

INTRODUCTION TO **NETWORKS**

TASK – 1 HOW TO CONNECTS PHONE TO THE INSTAGRAM.

Firstly, I open the instagram app then I see the loading effect on my screen. Then, I gave the signal to connect wifi and to wifi router. Then the router gives the information to the server, as which you are connect to the company as jio, idea, vi etc... After this, that company gives the signal or information to the instagram server. Lastly, it takes information and sends back to my phone my app data.

TASK – 2 DEVICES WHICH ARE CONNECTED TO DIFFERENT ROUTERS.

- Smart phone which is connect to WAN.
- Laptop which is connect to the WAN or LAN.
- Smart watch connect to the PAN.
- Smart TV is connect to the LAN or WAN.

So, LAN, WAN, PAN like are the different types of networks.

- LAN :- Local area network which is we can find or connect locally like our own wifi, our own personal network.
- PAN :- Personal area network which is runs in surtain areas only like in smart watch as a bluetooth.
- WAN :- Wide area network which is covered largest community of internet of city.

TASK – 3 DIFFERNCE BETWEEN INTERNET AND INTRANET.

Internet

- It is used as a public network.
- Anybody can use the internet .
- Example :- Google, youtube, chrome etc..

Intranet

- It is only used for private network.
- Only some people can used that like having permission to use.
- Example :- As in college, school, instiutes etc..

So, currently I am going to classes where i have used this intranet type network.

TASK – 4 GIVE THE INFORMATION THAT HOW DATA TRAVELS

First of all, I take the app call flipkart then I search in it and that request goes to the private router then that router gives the information to the city network or as the card network like jio, vi, idea etc.. Second of all, this further gives information to the app server which they reads and sends back to my phone via same route.
