

DAY - 4

Date _____
Page _____

1 Open your laptop and identify the GPU model installed. Write down the GPU's brand, model and whether it is integrated or dedicated.

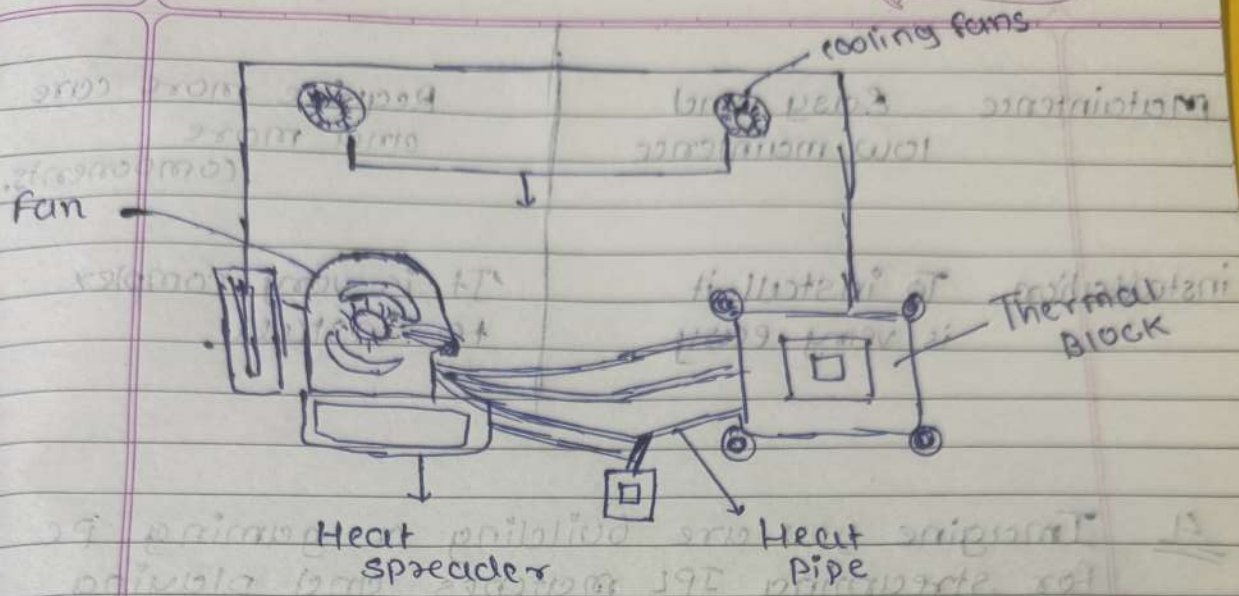

→ Without opening the case of laptop by going to or clicking on windows $\times$ α $\rightarrow$ device manager
Display adapters $\leftarrow$

Where, I can see laptop having Intel Iris Xe Graphics.

↓
Brand is Intel
↓
Integrated GPU
↓
Suitable for daily work uses.
Memory depends on it RAM of system.

Manufacturer Intel

2 Take a clear photo or screenshot of the cooling system inside the PC or from a PC hardware simulator. Label the cooling components and describe their function.

3 Create the comparison table and list at least 3 difference of cooling system and liquid cooling system for CPU, including factors like cost, efficiency, and maintenance.

	Air cooling system	Liquid cooling system.
Quality	Good for normal uses and basic type of gaming	Better for high performance CPU and heavy workloads.
Cost	Usually cheaper in market	Very expensive

Maintenance

Easy and low maintenance

Require more core and more components

Installation

To install it is very easy

It is very complex to install.

4 Imagine you are building a gaming PC for streaming IPL matches and playing heavy games. Choose between air cooling system or liquid cooling system and justify your choice.

→ Now, according to me to build-up a gaming PC, I will choose the liquid cooling system of PC.

Reason is just because gaming needed high performance working so in that it can stream IPL matches also. Other than this, it produce a lot of heat so it is very good for to make it cool.
