

DAY - 2

1. Draw a labelled diagram of an ATX motherboard and mark at least 8 different slots and ports.

2. Research and list 3 popular CPU socket types. And name one compatible CPU model of each.

→ LGA 1700 Manufacturer by Intel.

→ Compatible for Intel core i5 and also supports to 12th, 13th and 14th generations.

AMD → Ryzen 5 7600 made by AMD.

→ Ryzen is compatible for ex which only supports Ryzen 7000, 8000, 9000 series.

AMD → Ryzen 5 5600 which made AMD
→ Supports to 1000-5000 Ryzen
series processors.

3 Explain in your own words the primary functions of the CPU and the chipset on a motherboard and describe how they work together when you open a music app like Spotify.

→ Now, same as freefire question,
open the music app as Spotify

↓
CPU reads all the instructions and
successfully opens the app.

↓
Then, SSD finds the communication files.

↓
Now, it transfers all message to RAM
and all things like files and all will
read by CPU.

↓
After that it loads on the screen
the page of Spotify.

↓
By selecting the song, CPU sends message
to chipset the all thing like audio,
process all things takes place.

4. Find
and
lab

4. Find a clear photo of a motherboard and identify ports by circling them or labelling each one.
